Backtesting Reimagined

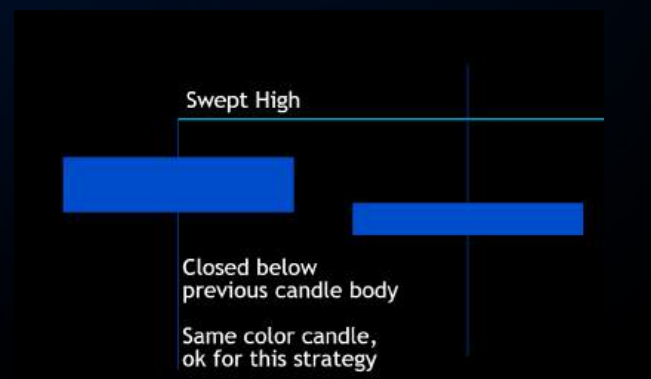

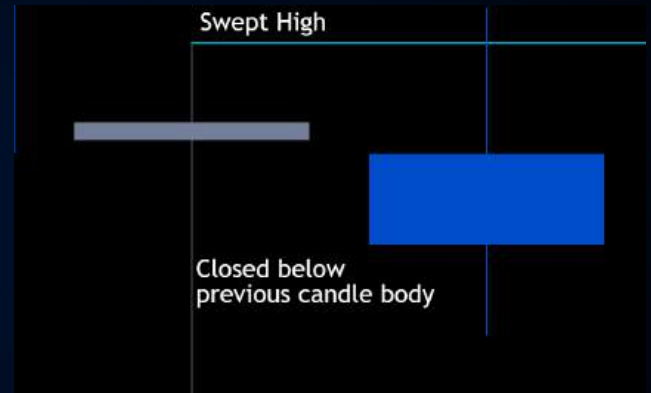

Educational Components

EBP (Engulfing Bar Play) candle defined: For this strategy, an engulfing candle will be a candle that sweeps the previous candles H/L and then closes beyond the body of the other side. See examples below. Note, the candles **do not** have to be different colors for this model.

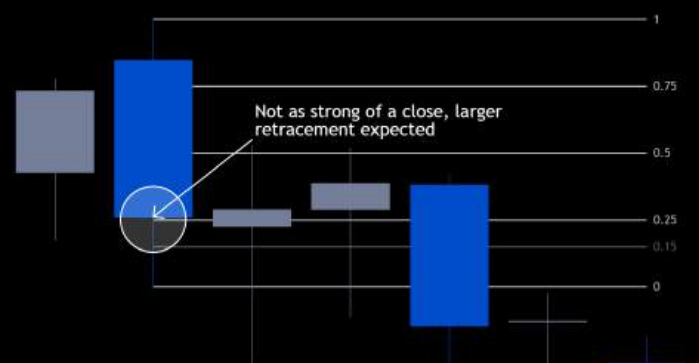

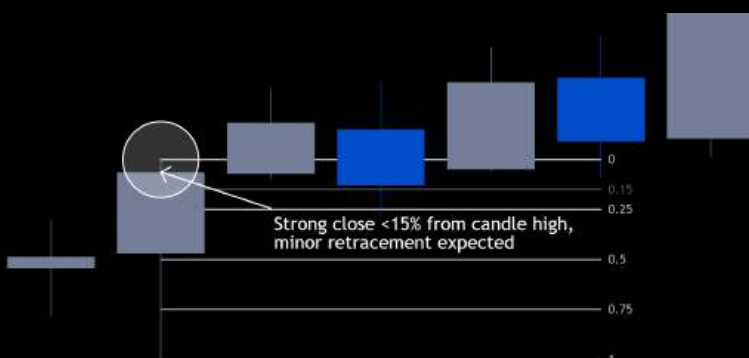

Bullish Engulfing

Bearish Engulfing

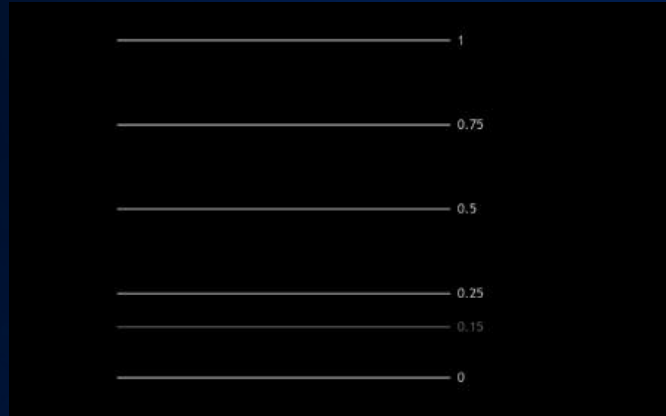

Candle Strength of close: Depending how strong/decisive the Engulfing candle closes determines how much of a retracement is likely before potential continuation. 15% or less to the candle H/L indicates a very strong close

Strategy Details

General parameters: 4-hour and higher time-frames. Gold, Forex pairs, and indices. Videos most commonly showed XAUUSD, EURUSD, & the Nasdaq.

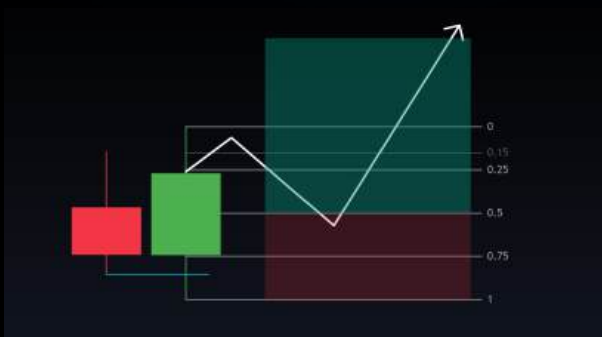

Drawing tool fibonacci retracement settings: You'll need a fib retracement drawing tool with settings at 0, 0.15, 0.25, 0.5, 0.75, and 1. Reduce the opacity on the 0.15 line to 50%.

Entry Trigger #1 (Strong EBP retracement): After an EBP candle that closes strongly <15% from the candles H/L, set a limit order at 25% retracement, with stop loss at the 75% retracement, targeting 2R.

Entry Trigger #2 (Indecisive EBP retracement): After a less decisive EBP (more than 15% from the candles H/L), set a limit order at 50% retracement, with stop loss at the the origin of the EBP candle retracement, targeting 2R.

Strategy Details

Other rules & considerations:

- After a new HH/LL is created on your time-frame, put stops to breakeven
- No entering another trade while one is already active on the same pair unless stops are already to breakeven.
- If the candle is very indecisive (closing with more than 50% retracement), use market entry for Entry trigger #2.
- Can consider optimizing by incorporating HTF POIs (supply/demand zones, imbalances, liquidity sweeps, etc.) to improve probability of continuations or reversals.
- If very confident in DOL, can trail runners beyond 2R.
- Can consider combining this swing strategy with ltf entry models for larger R-multiples.

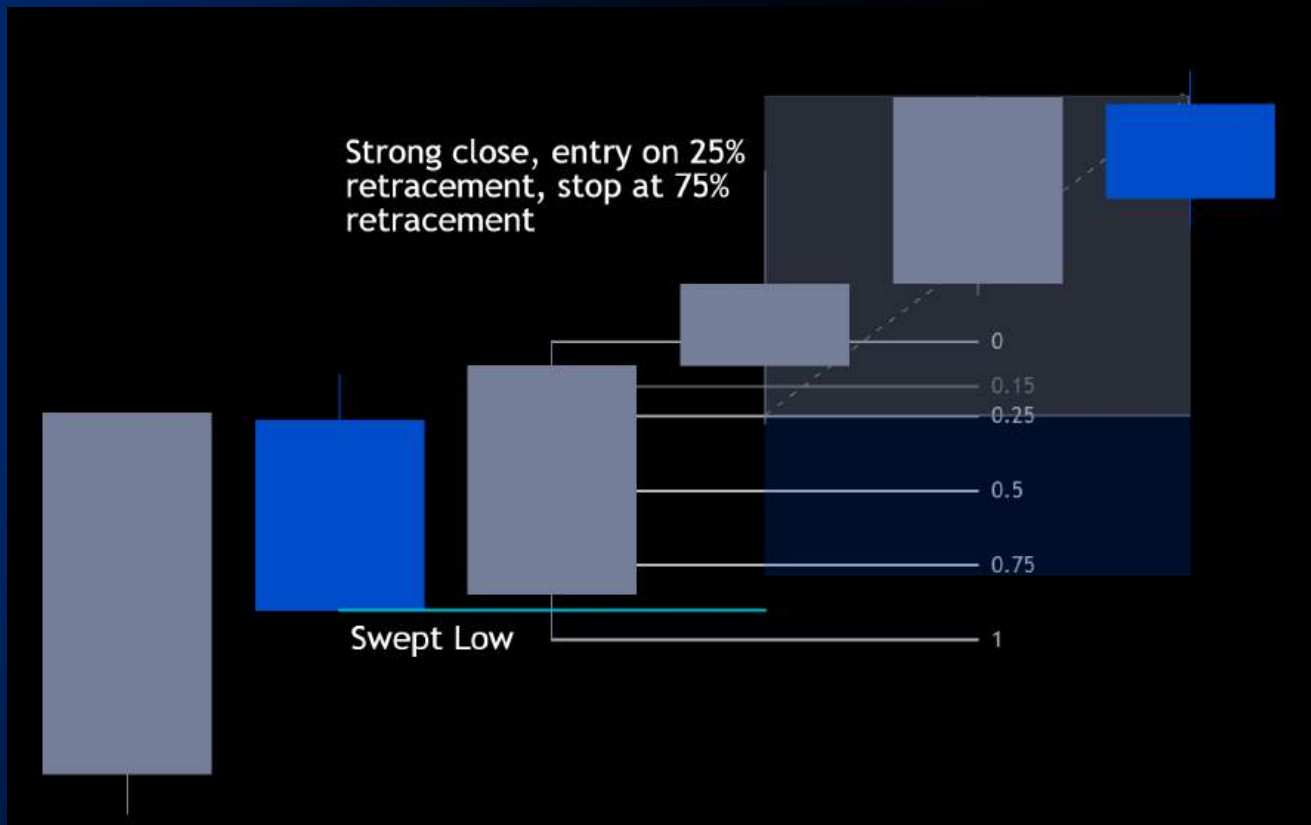

Trade Checklist

- ✓ *Wait for a HTF EBP Engulfing candle*
- ✓ *Strong close, limit at 25% retrace, stop loss at 75% retracement*
- ✓ *Indecisive close, limit at 50% retrace, stop at origin of EBP engulfing candle*
- ✓ *B/e after HH/LL, target 2R*

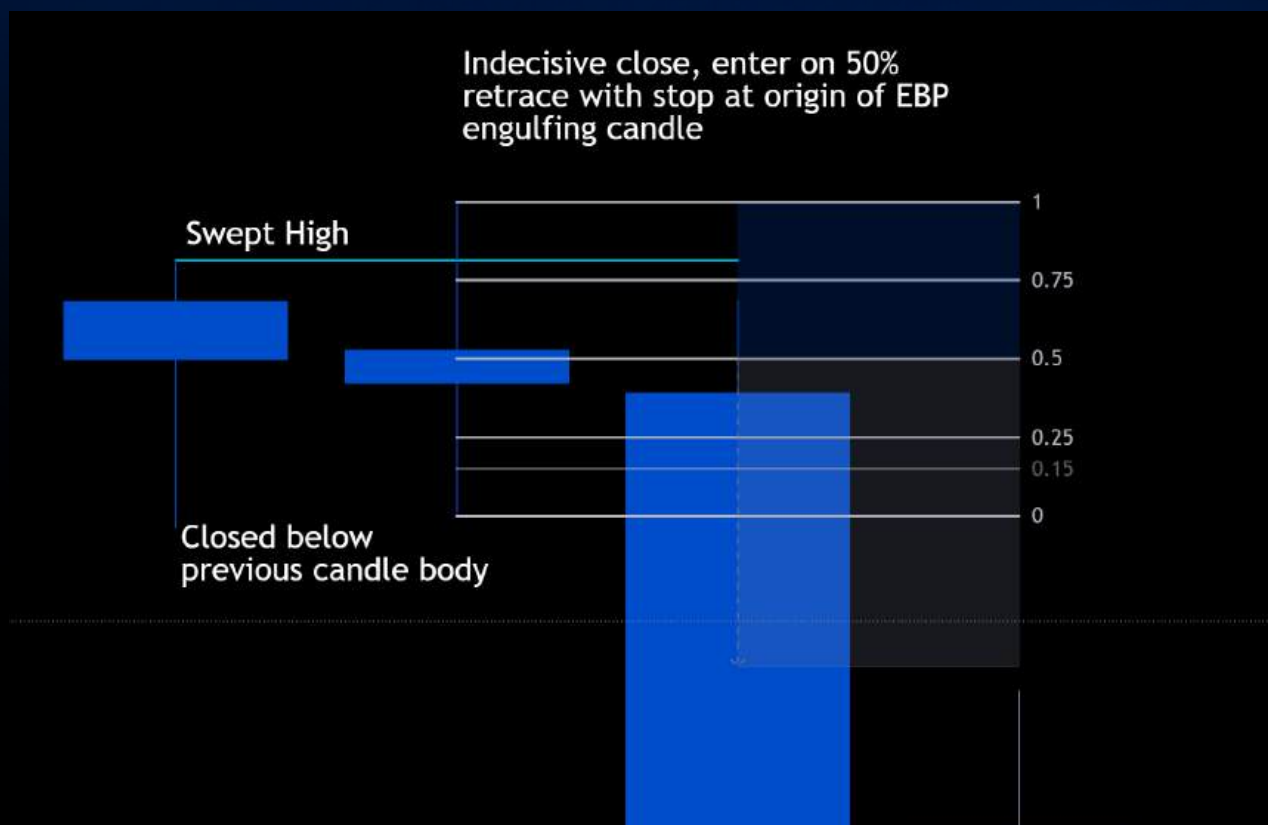

Remember, if any of the parameters are missing, the trade quality is reduced. Aim to only take A+ setups!
